Trends in Annual Sea Ice Persistence

Based on SMMR/SSMI Sea Ice Concentrations (1979-2008)

### **Distributed Biological Observatory (DBO) Sites**

- Regional "hotspot" locations along a latitudinal gradient will comprise the DBO sites
- DBO sites are considered to exhibit high productivity, biodiversity, and overall rates of change
- DBO sites will serve as a change detection array for the identification and consistent monitoring of biophysical responses

# A Climatology of the DBO Sites

Sea Surface Temperature (AVHRR) Sea Ice Concentration (SMMR/SSMI) Sea Ice Breakup/Formation Timing (SMMR/SSMI) Solar Insolation (NASA)

Chlorophyll-a Biomass (Globcolour) Surface Nitrate (World Ocean Atlas)
